The aim of this research is to know if the relationships between the ERP systems and the information systems are guided by certain factors and, as a result, to understand, more in-depth, the factors affecting these relationships. More precisely, this analysis aims to study whether assigned values given to these factors could guide the evolution of ERP systems in a manner that promotes IS integration; and if the opposite assigned values to these same factors could guide the evolution of ERP systems in a manner that provokes IS disintegration instead.

This manual, written with the objective of providing detailed training to both, consultants and users goes deep into the subject from initial configurations to covering the entire Order to Cash and logistics cycle. The integration points of SD-LE with

Purchasing/Inventory and Accounting are explained in detail and the chapters marked clearly if it is a Configuration (C) or Transaction (U) or both. Since most of the book has been written in standard SAP, once a company code is set up along with some basic configurations defined in the first few pages, a SAP user, if so desires, can stay only with the areas marked 'U' by passing the 'C' since not everything in standard SAP depends on configurations. Consultants or to-be consultants, of course, need to understand both sides of SAP. The effects of changes done in configuration are immediately followed by their effect on the transactions, thereby making the learning relational in real time for better understanding. From the user's perspective, not much from the subject has been left out in writing this manual and every effort has been taken to keep it relevant to the execution of order processing and logistics functions of day to day working on SAP in an orderly flow. This manual is really a result of many years of training both consultants, and business users. The author appreciates your comments and suggestions on improving this book. If I can be of any assistance in helping you understand the subject better or obtaining access to the system on which it was written for easier understanding, please feel free to drop in a mail to shefariaentinc@gmail.com

This volume contains a selection of papers from the First Workshop on Subject- Oriented Business Process Management (S-BPM ONE). Establishing a multi- and cross-disciplinary interchange of underlying and applied concepts, successful application studies, and innovative development ideas, the workshop emphasized the proactive realization of role- or actor-oriented modeling on the basis of exchanging messages when accomplishing tasks. The workshop was organized as a forum for the discussion of foundations, achievements, reflections, and further developments. In this way, its contributions not only addressed the current state of the art, but also the various lines of research and development, either running or planned. The state of the art is reflected in terms of concepts, modeling language, and tool features on the one hand. On the other hand, it is reflected through the discussion of industrial case studies. These indicate the current practice when implementing the subject-oriented BPM paradigm in industrial settings. By challenging conceptual foundations they also allow us to define a common ground for future developments in research and practice. The S-BPM ONE contributions focus on challenges arising from the evolution of service-oriented architectures and the need for more flexible business organizations. The latter require coherent and adaptive representation and processing techniques for business process modeling and execution. Corresponding technologies have to be grounded in theories of computer science, in order to provide an adequate infrastructure for thorough BPM including technology-enhanced change management.
