Freedom in the World, the Freedom House flagship survey whose findings have been published annually since 1972, is the standard-setting comparative assessment of global political rights and civil liberties. The survey ratings and narrative reports on 192 countries and a group of select territories are used by policy makers, the media, international corporations, and civic activists and human rights defenders to monitor trends in democracy and track improvements and setbacks in freedom worldwide. Press accounts of the survey findings appear in hundreds of influential newspapers in

the United States and abroad and form the basis of numerous radio and television reports. The Freedom in the World political rights and civil liberties ratings are determined through a multi-layered process of research and evaluation by a team of regional analysts and eminent scholars. The analysts used a broad range of sources of information, including foreign and domestic news reports, academic studies, nongovernmental organizations, think tanks, individual professional contacts, and visits to the region, in conducting their research. The methodology of the survey is derived in large measure from the Universal Declaration of Human Rights, and these standards are applied to all countries and territories, irrespective of geographical location, ethnic or religious composition, or level of economic development.

A good knowledge of research methodology is extremely important to conduct a scientifically sound research, and a valid research is essential for the development of every science, so does AYUSH systems of medicine. The movement of research in Medicine dates back to the times of its origin, when Greek Physician-Philosopher Hippocrates freed Medicine from superstitions, and presented it in the initial scientific form. Thereafter, the Roman Philosopher Galen stabilized the foundations of Hippocratic medical thoughts, on which the Arab and Iranian physicians like Ra'zi and Ibn Si'na, built an edifice and developed the system to great heights. Ibn S'n laid down guidelines for clinical testing of drugs as early as in 11th Century. The scientific research in AYUSH Systems of Medicine was given a boost in India by a versatile genius, Masi'h al-Mulk H'aki'm Ajmal Kha'n, in the 1920s. He spotted Dr. Sali'm al-Zama'n S'iddi'qi, a chemist, for undertaking chemical studies on some important medicinal plants, used in Unani System of Medicine. The present scenario of the AYUSH systems of medicine and its contribution to healthcare is very important to date. There are several areas, where traditional medicines are independently able to manage the diseases, such as skin diseases, liver diseases, GIT disorders, etc., but scientific data of these claims are lacking. So, it is the need of the hour to explore and evaluate the AYUSH systems of medicine on internationally acceptable scientific parameters. For the purpose, a number of books are available in the market, but it is a very tough task for the newbies to understand the basics of research from these high-level books. This book is written in simple and palatable language, especially for the PG Scholars and AYUSH Researchers, who face difficulty in understanding the subject. The book deals with research and its types, research problem, hypotheses, research designs, and data collection, etc. with updated guidelines. We hope that the purpose of writing this book would be fulfilled and the Postgraduate Scholars, as well as other researchers, will find this book helpful in understanding the basics of Research Methodology.

As an alternative form of medicine, Unani has found favour in India. These Unani practitioners can practice as qualified doctors in India, as the government approve their practice. Unani medicine is very close to Ayurveda. Both are based on theory of the presence of the elements (in Unani, they are considered to be fire, water, earth and air) in the human body. According to followers of Unani medicine, these elements are present in different fluids and their balance leads to health and their imbalance leads to illness. Government have exclusive department of Indian system of medicine inclusive of Unani under Health ministry and several states have department and institutions to ensure the proper regulation and development of Unani medicine in India. Herb gardens, nursery of medicinal plants, experimental and field scale cultivation are the major initiatives taken for the improvement of medicine. Skin disease, liver disorder, sexual disturbances, pulmonary, sinus and communicable diseases are the major effective treatment achieved areas for Unani. Tremendous progress has been registered in the development of modern medicine. Yet, medicinal plants continue to be an important source of drugs throughout the world. Unani medicine is one of them, plant as a source of drugs of much more important for the developing countries. This book majorly deals with the, habitat, description, procedure and time of collection, chemical constituents, method of processing, therapeutic uses of medicinal plants. This book also constitutes the list of institutes of Unani medicines, list of college of Unani medicines in India, world importers of natural medicine. This publication is one of its kinds which clearly indicate the usefulness of Unani medicine, shows

how the plant secrets, preserve the natural secrets/ hormones/ juices which ultimately uses in Unani system of medicine. This book is most informative and useful for students, Research scholars and scientist. We hope this book will achieve the long standing demand of herbal chemists.

Increasingly, modern medicine relies on so called traditional or ancient medical knowledge. Holistic practices such as adhering to proper diet, observing rules for appropriate behavior, and administering medical preparations are coupled with the latest technology and methods to treat the whole patient. In light of this trend, there is much to be gained from understanding of one of the oldest medical systems still in existence. Tibetan Medicinal Plants provides you a detailed analysis of how Tibetan plants are used in this centuries old system. The book opens with a summary of Tibetan medicine and covers the various habitats in which the plants are found. The main part of this volume encompasses 60 monographs listed by the Tibetan plant name. Each monograph consists of several chapters addressing different topics related either to the Tibetan or the Western approach. Most of the monographs contain a description of the macroscopic and microscopic characteristics of the used plant parts, and anatomical features of 76 plants are provided. Each monograph presents an overview of the known chemical constituents and pharmacological properties of each plant and describes their use in Tibetan medicine. In contrast to other publications on Tibetan medicine, where translations of the Tibetan terms are given in other languages, this book treats the Tibetan word as a technical term, keeps the Tibetan term and explains its meaning, lessening confusion by reducing the number of translations. Traditional Tibetan medicine has been in existence for centuries. Curative practices existed in the prebuddistic era, and the art of healing developed more than 2500 years ago. Tibetan Medicinal Plants provides a comprehensive overview of all plant types, thus making it easier to grasp the Tibetan concept. It gives you a comprehensive look at this centuries old science.

Includes summarized reports of many bee-keeper associations.
